SUMMARY

Full-Stack Web Developer with 6+ years of experience building scalable web and mobile applications using React, React Native, TypeScript, Node.js, and modern JavaScript frameworks. Experienced across enterprise eCommerce platforms, CMS-driven architectures, and full-stack SaaS products, with hands-on expertise in frontend engineering, backend services, API integrations, SQL/NoSQL databases, and real-time systems. Proven ability to develop production-ready applications end-to-end, collaborate cross-functionally, lead and mentor developers, and deliver high-quality user experiences across web and mobile platforms.

WORK EXPERIENCE

Gap Inc. | Web Content Developer (WCD) | October 2025 – Present | Remote, USA

- Develop and maintain reusable frontend components using React and Material UI within Optimizely, supporting high-traffic eCommerce experiences.
- Build dynamic content using JSON-driven Amplience CMS, enabling scalable and flexible content delivery across site.
- Collaborate closely with producers and design teams to translate Figma specifications into production-ready components.
- Ensure consistency with brand and business requirements (BPs), delivering responsive, high-quality user experiences across devices.
- Lead weekly standup updates and support the onboarding of new developers by conducting shadow sessions and providing guidance on frontend workflows and best practices.
- Contribute to a modern frontend ecosystem, working within component-based architecture and structured content models

Nolancode | Freelance Full-Stack Software Developer | October 2021 - Present | Remote, USA

- Built and optimized single-page applications (SPAs), modernizing legacy-style architectures into scalable, component-based frontend systems using React, TypeScript and modern JavaScript (ES6+).
- Designed and developed full-featured admin dashboards and internal moderation tools for managing user-generated content, moderation workflows, and system data.
- Built interfaces for content review, user management (roles, permissions, suspensions), and action-based workflows (approve/remove/report).
- Implemented advanced filtering, search, and data visualization features (charts, analytics dashboards) for monitoring platform activity.
- Developed reporting systems and moderation pipelines to support trust & safety initiatives, including content control.
- Focused on secure system design, including payment processing integrations and protection of sensitive user data.

DealerOn | Web Designer (Contractor) | April 2024 – October 2025 | Remote, USA

- Engineered and maintained high-performing, responsive websites for automotive and legal clients, ensuring cross browser compatibility and enhanced user experiences.
- Orchestrated onboarding and mentorship initiatives for new hires, establishing streamlined workflows and best practices.
- Formulated reusable front-end components to support scalable site functionalities.
- Executed quality assurance testing across various browsers and devices, emphasizing accessibility and performance.
- Collaborated closely with development teams to implement cohesive, user-friendly interactive features.

Edenred | Frontend Web Developer | February 2021 – October 2021 | London, UK

- Contributed significantly to high-profile client projects utilizing React, React Native, and Angular as part of agile teams.
- Developed responsive web and mobile applications for global brands, concentrating on usability and performance.
- Spearheaded Salesforce integration on a pivotal project to enhance user experience and increase conversion rates.
- Utilized Git and Azure DevOps to oversee version control and (CI/CD) pipelines.
- Collaborated with cross-functional teams to deliver accessible and responsive front-end solutions.

TECH STACK

- Frontend Development:** React, Next.js, TypeScript, JavaScript (ES6+), Redux, HTML5, CSS3, Tailwind, Bootstrap
- Databases & Backend:** Node.js, Express, Python (Django), REST APIs, GraphQL, MongoDB, MySQL, PostgreSQL
- Tools & Platforms:** Git, AWS, Azure, Netlify, Nginx, PM2, SSL, Digital Ocean, Heroku, CI/CD, Vite, Webpack
- Testing & Optimization:** Jest, PWA, Performance Optimization, SEO

PERSONAL PROJECTS

Gym Buddies • Social Fitness Application

- Developed a full-stack social fitness mobile application using React Native (Expo) with TypeScript and a MERN backend, enabling users to log workouts, track nutrition, and connect with a fitness community in real time. The app features a rich social feed with media carousels, fullscreen video/image viewing, emoji reactions, a threaded comments system with infinite scroll, and post edit/delete functionality — all built with optimistic UI updates for a seamless experience. An AI-powered Planner generates personalised workout and diet plans, while a Nutrition Tracker delivers macro ring visualisations using React Native Skia and a scrollable date-based food log with AI-assisted food lookup. Socket.io drives real-time group chat with @mention support, message editing, swipe-to-quote, and per-file reactions, complemented by a streak system, milestone achievements, and PR detection to keep users motivated. Clerk handles authentication, Cloudinary manages scalable media storage, and React Query ensures efficient data fetching and caching.

CreAlte • AI Powered Image Generator

- Created a cutting-edge MERN application that leverages the power of AI (specifically OpenAI's DALL-E and ChatGPT models), to enable users to generate images from textual prompts. The application is styled with Tailwind CSS, and features animations and visual effects with Framer Motion and React Tilt, to create an immersive interface. React Chart.js is used for dynamic data visualization, while Socket.io enables real-time collaboration through live chat functionality. Scalable image storage and manipulation is ensured via Cloudinary and React Crop, secure payments are processed via the Stripe API, while Node-Schedule automates daily checks on subscription details, and Nodemailer facilitates communication with automated emails. CreAlte is a sophisticated web application that highlights technical proficiency in full-stack development, AI model integration, and third-party service utilization.

NovaQuest • Mobile Application

- Developed an engaging space-themed mobile app for kids, leveraging the NASA API to showcase captivating imagery, including astronomy pictures and Mars rover footage. Features include tracking the International Space Station, accessing details on asteroids, and exploring planets and dwarfs within our solar system. The app integrates educational elements with interactive games, like trivia challenges and physics-based activities, utilizing Matter.js, complete with a global leaderboard. NovaQuest prioritizes a safe environment with community features for posts and comments. It gamifies exploration with achievements and XP, accompanied by cool sound effects, real-time notifications, animations, and random facts for an engaging user experience. The app's technical foundation includes Firebase for authentication, Redux for state management, React Navigation for routing, and a functional admin panel for seamless content and user control.

Love is in Cyprus • Dating Application

- Developed a dynamic dating application using the MERN stack, with Redux for state management. Key integrations include Google Firebase for OTP authentication, Socket.io for real-time chat and notifications, PayPal API for transactions, React Webcam for image uploads, and facial recognition for verification. Features an admin management system for site control, Node-ipinfo for geo-location controls and IP blocking, Chart.js for analytics, Mailchimp API for mass communication, and Nodemailer for automated responses. The app is also accessible as a PWA, for enhanced functionality and offline use.

Apex Scrap • Vehicle Scrap Value Finder

- Designed and built an application that enables users to determine the scrap value of any vehicle by entering the license plate number. Developed using the MERN stack, the project incorporates Nodemailer for email functionality, ReactCountup and Swiper for smooth visual effects, Formik and Yup for form validation, and Axios for efficient data retrieval from the DVLA API.
